

Business Cycle Index

The iM Business Cycle Indicator (BCI) is at 161.9 marginally up from last week's revised 161.8. BCIg fell to 11.7 from last week's 12.8.

The derived off peak indicator BCIp at 50.3, which translated to the BCIw as an equivalent 27 weeks possible lead to a recession with a remote probability of a recession occurring.

The indicators show that is too early to make a recession call.

Summary 2-21-14:

The IBH stock market model is out of the market. The MAC stock market model is invested, the bond market model avoids high beta (long) bonds, the yield curve is steepening, the gold model is not invested, but the silver model is invested. The recession indicator COMP is lower from last week's level, and iM-BCIg is also lower from last week's level. MAC-AU is invested.

Stock-market:

The IBH-model is out of the market as shown in Fig. 1. A sell signal was generated 49 weeks ago when the WLlg_shortEMA moved below the WLlg_longEMA. Currently the WLlg_shortEMA indicator is just below WLlg_longEMA. If the sell signal was correct then WLlg_shortEMA should move decisively below WLlg_longEMA, which is currently not the case. However, had it not been for this sell signal, the model would have generated another sell signal on Sep-20-13. A Sell-C signal was generated on during week ending 11/15/13. The IBH-model is described [here](#) and the latest rules can be found [here](#).

The [MAC-US](#) model stays invested. MAC-US Fig 2 shows the spreads of the moving averages. The sell-spread is near last week's level. A sell signal is not imminent. The sell spread (red graph) has to move below the zero line for a sell signal.

The MAC-AU model stays invested. MAC-AU Fig 2.1 shows the spreads of the moving averages of the Australia All Ordinaries Index. The sell-spread is higher than last week's level. The sell spread (red graph) has to move below the zero line for a sell signal. This model and its application is described in [MAC-Australia: A Moving Average Crossover System for Superannuation Asset Allocations](#).

Recession:

In Fig. 3 one can see that COMP is lower from last week's level, but far away from signaling recession. COMP can be used for stock market exit timing as discussed in this article [The Use of Recession Indicators in Stock Market Timing](#).

Fig. 3.1 shows our recession indicator iM-BCI_g, lower from last week's level. It is possible that BCI_g may have peaked in June. A recession is not imminent as one can clearly see.

Bond-market:

The [BVR-model](#) avoids high beta bonds (long-bonds) and also intermediate duration bonds. The Bond Value Ratio is shown in Fig 4. The BVR is near last week's level. According to the model, only when BVR turns upward after having been lower than the lower offset-line should one consider long bonds again.

The Yield Curve:

The [yield curve model](#) shows the steepening trend of the 10-year and 2-year Treasuries yield spread. Figure 5 charts (i10 – i2). The general trend is up, as one can see, although the yield curve has flattened recently. FLAT and STPP are ETNs. STPP profits from a steepening yield curve and FLAT increases in value when the yield curve flattens. This model confirms the direction of the BVR.

Gold:

There is no buy-signal yet from the modified Coppock Gold indicator shown in Fig 6. This model has been out of Gold since Nov-26-2012, but according to our forward projection a new [buy signal](#) should emerge before the end of March 2014. This indicator is described in [Is it Time to Buy Gold Again? - Wait for the buy signal](#)

Silver:

The modified Coppock Silver indicator shown in Fig 7 and is currently invested. This indicator is described in [Silver - Better Than Gold: A Modified Coppock Indicator for Silver.](#)

iM's Business Cycle Index (BCI)

BCIp, BCI and BCIG
updated to Feb 20, 2014

On past performance, BCIp = 100 can be interpreted as an average one year "time-to-live" to a recession.

Date	01/23	01/30	02/06	02/13	02/20
BCIp	71.4	56.9	46.3	49.0	50.3
BCI	164.0	162.6	161.5	161.8	161.9
BCIg	17.5	15.9	14.1	12.8	11.7

Please note: Past performance does not guarantee future returns, investments may increase or decrease in value and you may lose money using this model.
