## **Business Cycle Index**

The BCI at 231.9 is above last week's 230.1, and it is at a new high for this business cycle as indicated by the BCIp at 100. Also, the 6-month smoothed annualized growth BCIg is at 14.3, which is above last week's 13.5.

No recession is signaled.

NOVEMBER 3, 2017

## **Market Signals Summary:**

The MAC-US model is invested. Also, the "3-mo Hi-Lo Index of the S&P500" generated a buy signal on 10/3/2017 and is invested in the markets. The monthly updated S&P500 Coppock indicator is also invested. The MAC-AU is also invested. The recession indicators COMP and iMBCIg do not signal a recession. The bond market model avoids high beta (long) bonds, and the yield curve seems to be flattening. Both the gold and silver Coppock models are invested, and the iM-Gold Timer is in gold since 7/10/2017.

#### Stock-markets:

The MAC-US model generated a buy-signal 4/5/2016 and thus is invested in the stock-markets. The sell-spread (red graph) is above last week's level and has to fall below zero to signal a sell.

The <u>3-mo Hi-Lo Index</u> of the S&P500 is above last week's level at 12.04% (last week 11.44%) and is out of the market since 8/22/2017.

The MAC-AU model is invested in the markets after it generated a buy signal on March 21, 2016. The sell-spread is above last week's level and has to fall below zero to signal a sell. This model and its application is described in MAC-Australia: A Moving Average Crossover System for Superannuation Asset Allocations.

#### Recession:

Figure 3 shows the COMP near last week's level. No recession is indicated. COMP can be used for stock market exit timing as discussed in this article <a href="https://example.com/en-superscript-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stock-near-stoc

Figure 3.1 shows the recession indicator iM-BClg which is up from last week's level. An imminent recession is not signaled . Please also refer to the BCl page

The Forward Rate Ratio between the 2-year and 10-year U.S. Treasury yields (FRR2-10) is below last week's level and far away from signalling a recession. The FRR2-10 is trending downwards. A description of this indicator can be <u>found here</u>.

#### **Bond-market:**

The BVR-model avoids high beta bonds (long-bonds) and also intermediate duration bonds.

The Bond Value Ratio is shown in Fig 4. The BVR is above last week's level. According to the model, only when BVR turns upward after having been lower than the lower offset-line should one consider long bonds again.

#### The Yield Curve:

The <u>yield curve model</u> indicates the trend of the 10-year and 2-year Treasuries yield spread. Figure 5 charts (i10 – i2) shows that the yield curve's trend seems to be flattening. A buy FLAT signal was generated on 2/8/2017. FLAT and STPP are ETNs; STPP profits from a steepening yield curve and FLAT increases in value when the yield curve flattens. This model confirms the direction of the BVR.

#### Gold:

The modified Coppock Gold indicator shown in Fig 6. This model generated a new buy signal early November 2016 and is invested in gold. This indicator is described in <u>Is it Time to Buy Gold Again? – Wait for the buy signal ......</u>

The <u>iM GOLD-TIMER Rev-1</u> is invested in gold since 7/10/2017.

#### Silver:

The modified Coppock Silver indicator shown in Fig 7. This model generated a new buy signal late November 2016 and is invested in silver. This indicator is described in <u>Silver – Better Than Gold: A Modified Coppock Indicator for Silver.</u>

MONTHLY UPDATES (next report 12/8/2017)

## November 3, 2017

## Unemployment

The unemployment rate recession model (article link), has been updated with the October UER of 4.1%. Based on the historic patterns of the unemployment rate indicators prior to recessions one can reasonably conclude that the U.S. economy is not likely to go into recession anytime soon. The growth rate UERg is at minus 11.13% (last month 11.13%) and EMA spread of the UER is at minus 0.29% (last month minus 0.25%). Here is the link to the full update.

## The Dynamic Linearly Detrended Enhanced Aggregate Spread:

The updated level of this indicator, -129bps (last months -114bps), confirms the January 20, 2017 signal. Based on past history a recession could start at the earliest in October 2017, but not later than May 2019. The average lead time to previous recessions provided by DAGS was 15 months which would indicate a recession start for April 2018.

## Coppock Indicator for the S&P500

The Coppock indicator for the S&P500 entered the market end May 2017. This model is in stocks. This indicator is described here.

## **CAPE-Cycle-ID**

Fig 9a depicts the CAPE-Cycle-ID and the year-on-year rate-of-change of the Shiller CAPE. A model using this indicator invests in the market when the Cycle-ID is +2 or 0, and when the Cycle-ID equals -2 the model is in cash. This indicator is described <a href="https://example.com/here-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-change-ch

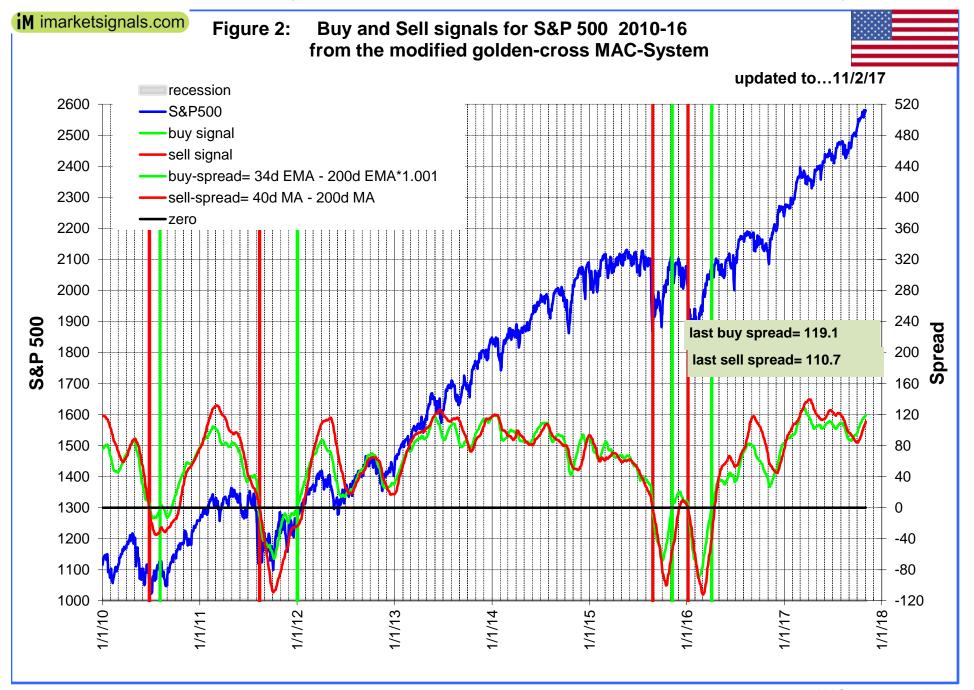

## **Trade Weighted USD**

The continued weakening of TW\$ value is seemingly halted for now.
